shaping a world class, person-centred  
primary health care system*

# Exploring the eHealth Functionality in the Clinical Audit Tool

Presenter: Rajeev Lal

# Clinical Audit Tool

*The Pen Clinical Audit Tool (also known as CAT4) is a software that analyses and reports on clinical information from GP clinical systems and presents in a statistical and graphical format which is easy to understand. It provides opportunity for GPs and Practice Staff to assess and improve quality and completeness of patient information.*

# Clinical Audit Tool

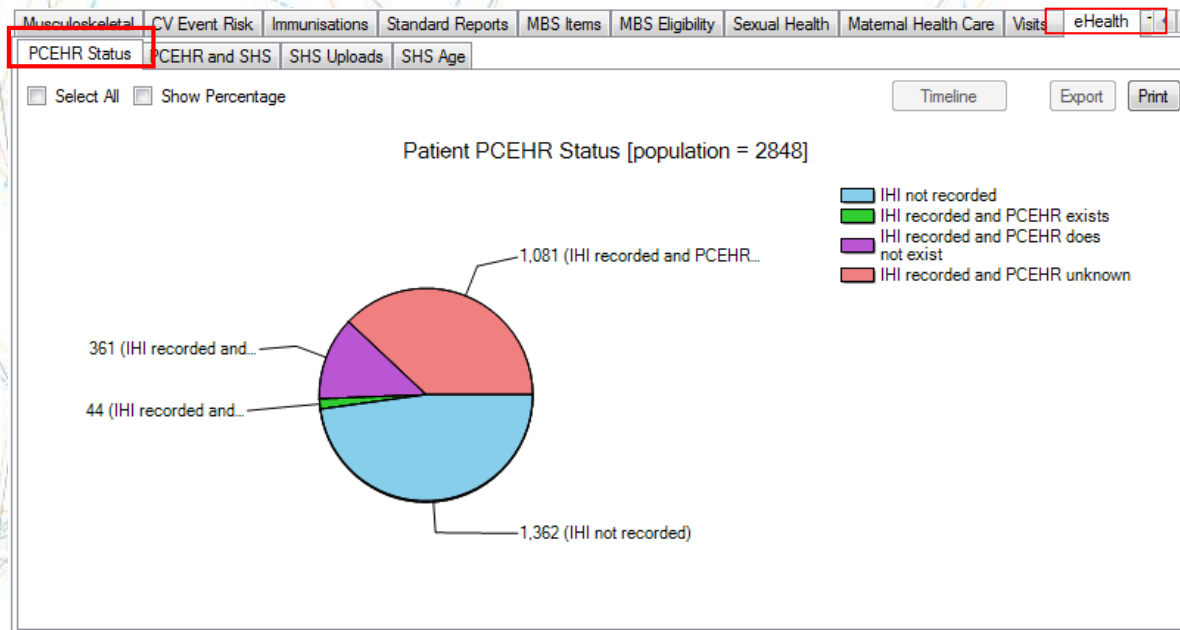

*With the changes in eHealth, clinical coding will be extremely important for the purpose of eHealth, data completeness and better patient care.*

*Missing or incorrect recorded data can lead to a clinician not being fully informed of patient risks, inefficiencies created when making referrals and it also leads to inaccurate population health data.*

*The eHealth tab provides a number of graphs showing information about PCEHR and Shared Health Summaries.*

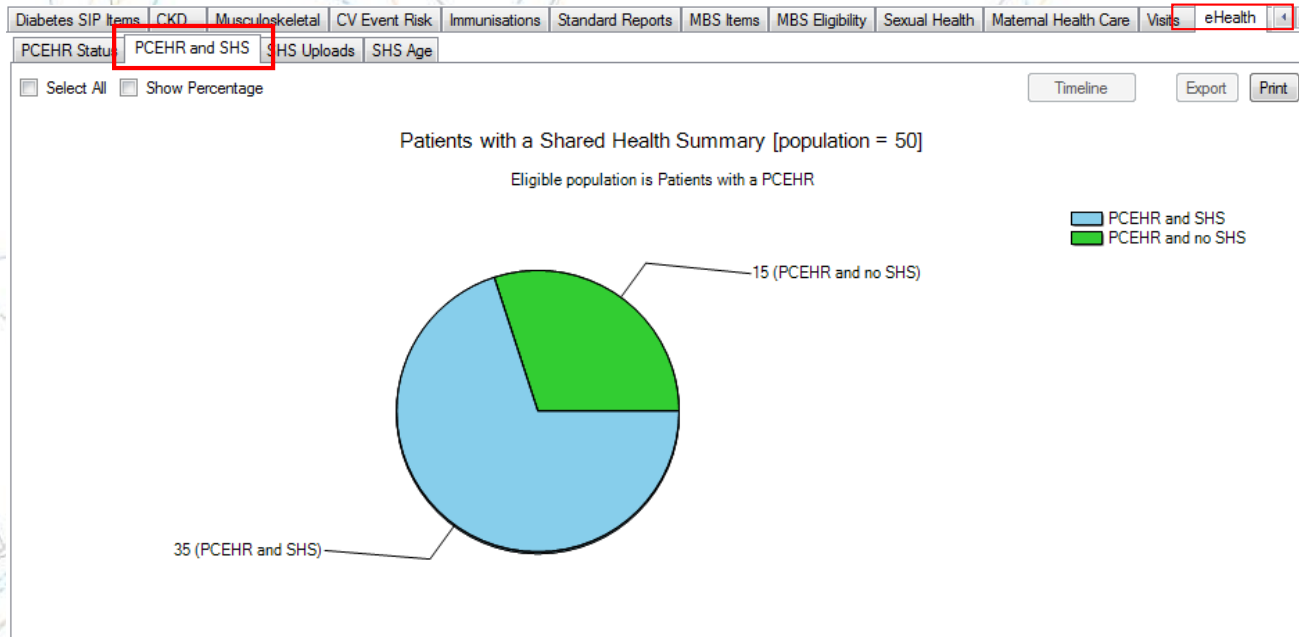

# eHealth – PCEHR Status

This graph will show patients that have an IHI recorded and, of that group, patients that the clinical system has detected have a PCEHR.

# eHealth – PCEHR and SHS

This graph will show patients that have a PCEHR and, of that group, patients that have a Shared Health Summary (SHS).  
The Date Range (Results) filter can be used to find SHS's that have been last uploaded in a timeframe.

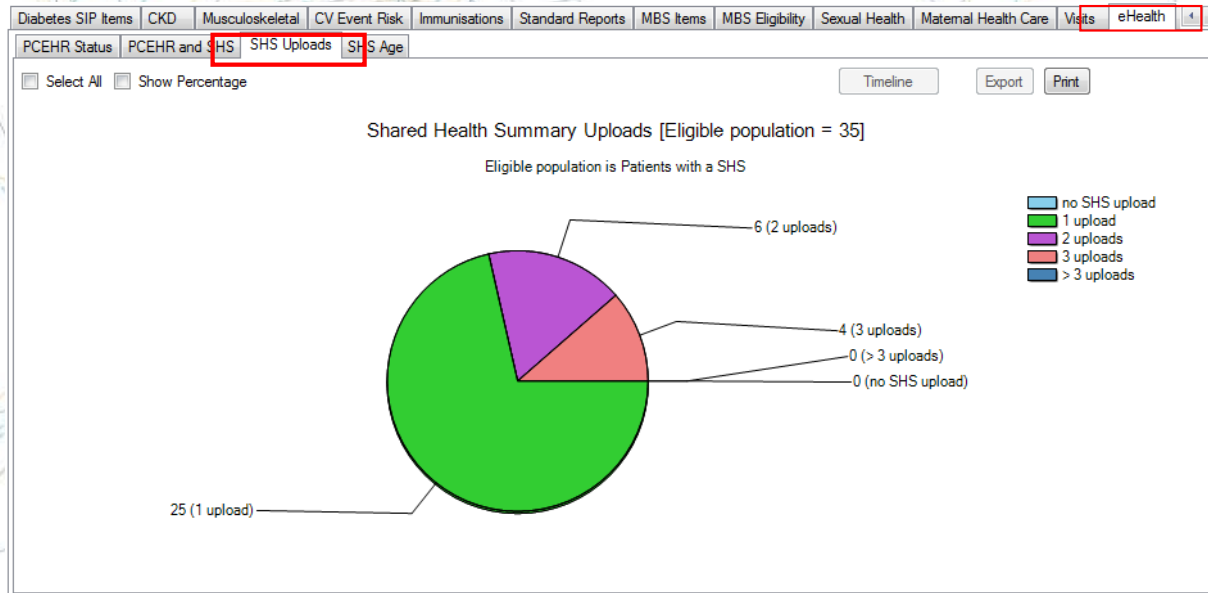

# eHealth – SHS Uploads

This graph will show patients that have a SHS and, of that group, the number of times the SHS has been uploaded.

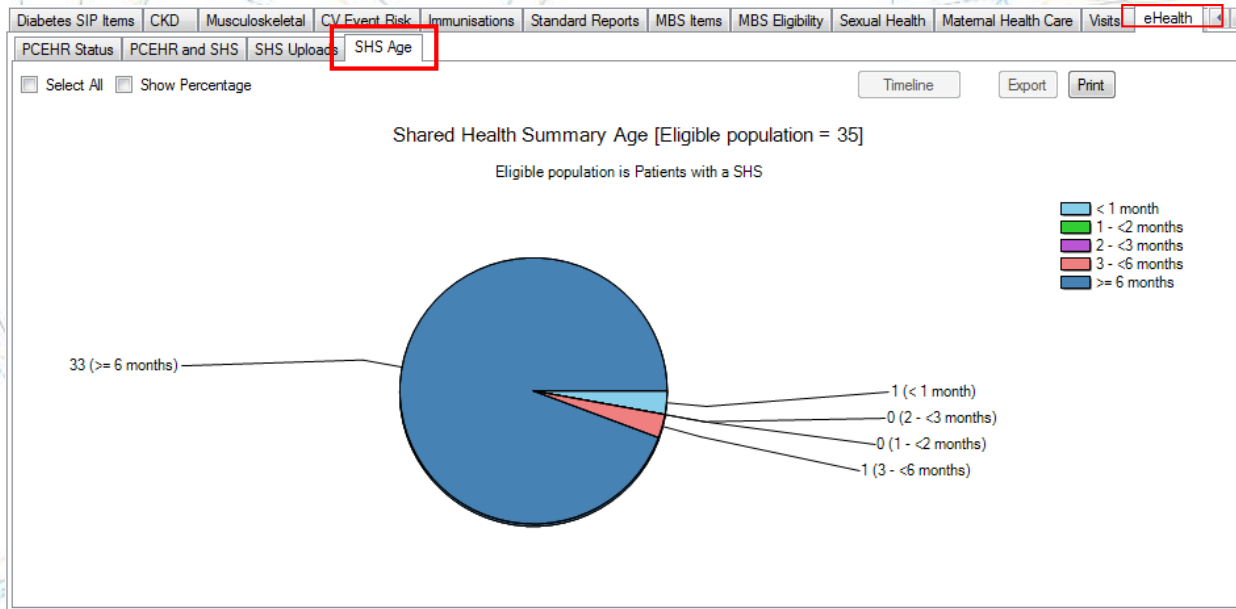

The Date Range (Results) filter can be used to find SHS's that have been last uploaded in a timeframe and will display the number of times in that timeframe.

Patients will only appear in the 'no SHS upload' category if their last upload date is outside the date range selected. If there is no date range filter applied this category will be empty.

# eHealth – SHS Age

This graph will show patients that have a SHS and, of that group, the age of the SHS. The age is calculated using the last upload date.
