Indigo Patient Safety Improvements
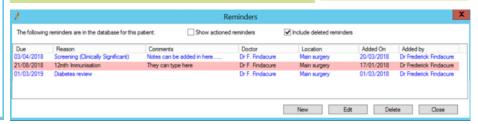

Reminders

Adding a Reminder *We have added the following features to improve the reminder process*
- Clinically Significant reminder type – to assist with filtering important reminders
- Free text comment – provides contextual information
- 'Days' interval – to ensure patients are contacted in a timely manner
- Reminder types – increased filtering of lists

Reminders in Patient Record
- Deleted reminders are now available to view
- Comment, Added by and added on fields created
- Now views actioned rather than sent reminders

Subpoena Tool

The Subpoena tool allows a clinic to provide legally required information as specified within the document. It includes **all** notes, diagnoses, reasons for visit, procedures, correspondence, and clinical images marked confidential.
Data can be filtered by date, Clinical data categories and Individual items within those categories

**The Tool is permission and password controlled.**
You cannot choose to exclude confidential information. Therefore we have developed a permission whereby access can be restricted to senior staff.

To set access go to
Setup > **Users** > **Edit** > **Set Permissions**.

Confidential information
- Setting of a usual doctor and/or 'deny access to other users' for the pt will require the emergency access password to be entered by anyone other than the usual doctor
- If no usual doctor is set the user will not be prompted for the emergency access password

My Health Record

We have upgraded our My Health Record integration to reflect the required changes in the CUPs program.

To minimise clinical risk, qualifiers for Past History items are now included – Laterality and severity of the diagnosed condition.

In-Patient Medicines chart

We have now included Short-term medications into the patient's National In-Patient Medicines chart when printed.

Access Drug Sheets from *Patient's clinical file>File>Print Drug sheet*

Patient Import/Export tool

We have improved the Patient Export feature to allow for a date range to be set and confidential material to be included.

This allows for better filtering of relevant information. Confidential material is password protected.
